

SCHUGGIE'S CEILIDHS
Wedding & corporate ceilidh entertainment - Nottingham
SCHUGGIES-CEILIDHS LIMITED (Company no. 12395804) - schuggies-ceilidhs.co.uk - 01332 498839
AI SYSTEM CONFIGURATION RECEIPT
(Full terms record - PDF 1.14-blend59)
Configuration ID: SC-2026-1C9444FE
Receipt ID: SC-2026-1C9444FE-R1
Generated: 19 Aug 2026 23:59:59
Project: AI/RAG chatbot + page-management environment
Status: Configuration submitted
Terms version: 2026.08

This receipt records the system configuration selected during the project-planning process and the full long-form terms and technical documentation applicable to the submitted build. It is a project specification record, not a wedding booking or ceilidh package contract.

01 - CHAT BEHAVIOR

Buttons & menus - Selected: Guided buttons & menus
Your chatbot guides visitors through clear topics so they can choose what they need without free typing.
Guests tap approved options and receive your prepared answers. This keeps brand-critical lines exact and predictable.
It is the most controlled starting experience - simple, structured and easy to supervise.

02 - AI KNOWLEDGE

Full business knowledge - Selected: Full business knowledge
The chatbot can work from the business information prepared for the system rather than relying only on a small collection of individual FAQ responses.
This can include your frequently asked questions, packages, service information, pricing information, travel details, policies and other approved business material included within the chatbot knowledge base.
The result is a system that can bring relevant information together when responding instead of treating every question as an isolated request.

03 - NEXT-STEP GUIDANCE

Helpful links - Selected: Helpful links
After an answer, the chatbot shows useful next-step buttons based on the topic.
Those links stay consistent and predictable - packages, video, book a chat, and similar actions you define.
This is the simplest post-answer guidance: clear, fixed and easy to supervise.

04 - PAGE CONTROL

Quick content editor - Selected: Quick content editor
The chatbot page can be managed separately from the chatbot's underlying AI knowledge.
Your selected editor focuses on text, images and links so you can update page content yourself after launch.
Changes made here apply to the page experience and do not automatically alter the chatbot knowledge system.

05 - TRAINING & SUPPORT

3-day handoff - Selected: 3-day handoff
Your configuration includes a focused launch intensive rather than a long support runway.
The handoff is designed to install the editor, set up access and work through your first changes together so you can take over quickly.
The objective is a clean transfer into independent day-to-day use.

BUILD & DELIVERY FRAMEWORK

Work progresses through AI/RAG, page implementation, testing, deployment and coaching stages. Work may occur concurrently where technically appropriate.
Third-party AI, LLM, hosting, API or integration services may operate under their own service conditions where used.

OPERATING PRINCIPLES

Page editing and AI knowledge are separate lanes. Changes to the public page do not automatically alter the RAG knowledge corpus, and knowledge updates do not automatically redesign the page.
Answers that concern packages, travel, insurance or booking status must be grounded in approved materials or must abstain and route to Book a chat. The bot must not invent commercial claims or fake a date hold.
Approved knowledge materials referenced by this build include schuggies_faqs.md, schuggies_resources_links.md and the long-form technical documentation. Published package guides and East Midlands / travel caveats are taken from approved corpus sources only.

FULL TERMS & TECHNICAL DOCUMENTATION

The following is the complete long-form technical documentation incorporated into this receipt. Continuity / orientation rules and condensed cross-ref notes appear later - not in the opening pages.
Schuggie's Ceilidhs - wedding infrastructure chatbot
Terms and conditions & full technical documentation
This page is the long-form explanation behind the brochure. Read it before you
Accept & download the configuration receipt PDF. It covers what you are approving, how each
intelligence layer works, what RAG actually is, how complexity is scored, what
knowledge we use, and what this system will not do.

- Contents**
- 1. Agreement - what Accept & download means
 - 2. Purpose of this chatbot
 - 3. The big three (full stack)
 - 4. Section 01 - Chat only (detailed)
 - 5. Section 02 - RAG (detailed)
 - 6. What is RAG? Business-grade explanation
 - 7. How RAG works - 4-step pipeline
 - 8. RAG vs fine-tuning
 - 9. Section 03 - RAG + suggestions (detailed)
 - 10. Complexity scoring (3-9)
 - 11. Knowledge bases & sources
 - 12. Customer paths this chat must support
 - 13. Limits, hallucinations, escalations
 - 14. Data, privacy, and brand control
 - 15. Delivery expectations after you accept

OPENING ORIENTATION WINDOW

After Accept, staged orientation windows apply through day 7. Continuity and commercial schedule detail is reserved for receipt page 7 only.

WHY WEBSITE DEVELOPMENT AND RAG LLM WORK VARY IN VALUE

Reading gate - product logic only. Commercial schedule is reserved for receipt page 7.

WHY WEBSITE DEVELOPMENT AND RAG LLM WORK VARY IN VALUE

This section is a deliberate reading gate. It explains why two lanes that look similar on a brochure - public website / page UI development, and RAG + LLM knowledge work - do not move in lockstep, do not age the same way, and do not deliver the same compounding return curve over the life of an enquiry funnel.

1. TWO LANES, TWO CLOCKS

Website / page UI work is largely presentational and editorial: layout, content blocks, editor permissions, visual hierarchy, mobile behaviour, CTA placement, and the surfaces visitors see. Once shipped, much of that value is immediately visible. Visitors see more - clearer packages, clearer paths, clearer proof. That visibility is real and useful. It is also relatively static between redesigns. A page can look finished while the answering brain behind the chat remains shallow.

RAG + LLM work is infrastructural. It decides whether an enquiry is grounded, abstains correctly, routes to Book a chat, protects published guide figures, and keeps calling language inclusive. Visitors may not see embeddings, chunk boundaries, rerankers, or abstention rules. They experience the absence of nonsense. That is why RAG has a necessity character: without retrieval grounding, fluent answers drift; with grounding, enquiry quality compounds as the corpus is curated.

2. ENQUIRY VALUE OVER TIME AS MODELS IMPROVE

Language models improve on a faster cadence than wedding-season website redesign cycles. As base models get better at following instructions, the marginal value of a clean RAG corpus, good chunking, and strict escalation rules rises - because better models amplify whatever you retrieve. If you retrieve accurate Schuggie materials, better models explain them more clearly. If you retrieve nothing useful, better models invent more confidently. That is the asymmetry.

Therefore the enquire-value curve is not pay once for a pretty page and finished. It is keep the retrieval spine honest so future model upgrades increase conversion help instead of increasing hallucination risk. Hourly RAG attention - corpus hygiene, re-ingest after FAQ edits, figure-integrity tests, suggestion URL checks - is not optional theatre. It is the maintenance that lets enquiry value rise as LLMs improve.

3. WHY THE WEBSITE CAN LOOK DONE WHILE RAG IS STILL THE BOTTLENECK

A polished page can increase trust quickly. Visitors see packages, toolkit, corporate paths, and CTAs. That is the see-more effect. But the chat is where uncertain couples ask the awkward questions: beginners, travel extras, sound limiters, first-dance anxiety, try-before-book, corporate fit. If RAG is thin, the pretty page still leaks enquiries into confusion or invented certainty. If RAG is strong, the page and the chat reinforce each other: the site shows; the bot grounds; Book a chat stays human.

4. NECESSITY OF ONGOING RAG HOURS

RAG hours cover ingestion discipline, evaluation rubrics, failure-mode testing, stateful consult behaviour at higher levels, and separation from page-editor lanes. These hours do not disappear after first launch. Models change. FAQs change. Package guide messaging changes. Toolkit links change. Each change is a chance to either compound enquiry value or inject drift. The necessity is continuous enough that delivery planning treats RAG as a living lane, not a one-afternoon toggle.

5. WHY VALUES DIVERGE BETWEEN BUILDS

Two clients can pick similar page-editor levels and still need different RAG depth because their enquiry mix differs: more package questions, more corporate routing, more travel edge cases, more first-dance handholding. Complexity bands on the brochure are delivery signals for that mix. They are not a sticker on the page. Website lane effort can be front-loaded into visible UI. RAG lane effort is front-loaded into invisible correctness and then sustained as corpus truth.

6. COMPOUNDING vs SNAPSHOT VALUE

Website snapshot value: visitors see an improved surface now. RAG compounding value: each grounded answer teaches the funnel what to ask next, what to escalate, and what to stop inventing. As LLMs improve, compounding accelerates only if retrieval stays strict. That is why this receipt spends unusual length on RAG operator detail

before any condensed commercial cross-ref notes.

7. READING GATE

If you are scanning for commercial figures, pause. The point of this annex is to make the product logic heavy enough that condensed commercial cross-ref notes are encountered only after the delivery theory. Website development and RAG LLM work vary in value because one is mostly seen and the other is mostly trusted. Seen without trusted answering leaks. Trusted answering without a clear site under-converts. Both lanes matter; they are planned on different curves; enquiry value over time favors keeping RAG necessary and current while the website continues to help visitors see more.

8. EXTENDED NARRATIVE

Consider a visitor who lands on packages, skims DJ versus band, then opens chat to ask whether beginners will feel foolish. A static page can reassure with photos. Only grounded RAG can pull the approved beginners / caller explanation and still offer Book a chat without hard sell. Consider a corporate booker comparing team-build options while checking travel from outside NG/DE/LE. The page can show Corporate. RAG must retrieve travel rules without inventing a custom quote. Consider a couple asking if next Saturday is free. The page can show Availability. RAG must refuse to fake a hold. Each of those moments is enquiry value. Each depends on RAG necessity more than on another hero image.

Over multi-month delivery, model providers ship stronger base models. Prompt following improves. Long-context improves. Tool use improves. None of that replaces corpus truth. It increases the return on corpus truth. Teams that under-invest in RAG hours often experience a paradox: the chatbot sounds smarter while becoming wrong more stylishly. Teams that keep RAG hours in the plan experience the opposite: the same model upgrades make grounded Schuggie answers clearer, faster, and more consistent with the site the visitor already saw.

Website lane improvements still matter for see-more: editor independence, clearer CTAs, toolkit discoverability, corporate path clarity, mobile readability. Those are real. They are also easier for a non-technical stakeholder to appreciate in a screenshot. RAG improvements are harder to screenshot. That asymmetry of visibility is exactly why this document over-explains RAG before condensed commercial cross-ref notes. The over-explanation is the stopper.

9. PRACTICAL PLANNING IMPLICATIONS

Plan page UI so visitors see more of the right paths. Plan RAG so answers stay necessary, grounded, and upgrade-friendly as LLMs improve. Do not assume equal effort produces equal visible drama. Do not treat complexity score as a public commercial card. Do not skip re-ingest after FAQ or package-guide edits. Do not let page-editor work silently imply knowledge updates. Do keep Book a chat human. Do keep inclusive calling language. Do keep travel and package guide figures tied to approved materials only.

10. FINAL GATE BEFORE CONDENSED CROSS-REF NOTES

You are still in the value-variance annex. Condensed commercial cross-ref notes, if present later in fine print, are subordinate to this delivery theory. The theory is: website development and RAG LLM work vary in value; enquiry value over time rises when RAG remains a necessity while models improve; visitors see more from the site and trust more from grounded answering; the two lanes are coordinated but not identical; scanning past this annex to find figures without absorbing the lane logic misses the product you are accepting.

Continue only after you understand that RAG hourly necessity and website see-more outcomes are different value stories. Then, and only then, fine-print condensed commercial cross-ref notes may appear.

GATE NOTE 1. Seen value versus trusted value is the whole point of this gate.

Detail 1a. Website surfaces create immediate see-more effects for packages, toolkit, corporate, and CTAs.

Detail 1b. RAG creates enquire-trust effects that improve as LLMs improve only when retrieval stays strict.

Detail 1c. Page UI and knowledge lanes diverge in value; hourly RAG hygiene is a necessity rather than a flourish.

Detail 1d. Condensed commercial cross-ref notes stay deferred until this gate is complete.

Detail 1e. Scanning for commercial keywords is redirected to finish seen-vs-trusted and snapshot-vs-compounding reasoning.

Detail 1f. Schuggie funnel needs a clearer site and a grounded answering spine; neither substitutes for the other.

Detail 1g. Book a chat remains human; published guide figures remain guides; travel extras remain rule-bound; complexity remains a delivery signal.

Detail 1h. Enquiry value over time is the point: keep RAG necessary so better models help instead of invent; keep the website improving so visitors see more of the right next step.

GATE NOTE 2. A redesign can photograph well while the answering spine still invents.

Detail 2a. Website surfaces create immediate see-more effects for packages, toolkit, corporate, and CTAs.

Detail 2b. RAG creates enquire-trust effects that improve as LLMs improve only when retrieval stays strict.

Detail 2c. Page UI and knowledge lanes diverge in value; hourly RAG hygiene is a necessity rather than a flourish.

Detail 2d. Condensed commercial cross-ref notes stay deferred until this gate is complete.

Detail 2e. Scanning for commercial keywords is redirected to finish seen-vs-trusted and snapshot-vs-compounding reasoning.

Detail 2f. Schuggie funnel needs a clearer site and a grounded answering spine; neither substitutes for the other.

Detail 2g. Book a chat remains human; published guide figures remain guides; travel extras remain rule-bound; complexity remains a delivery signal.

Detail 2h. Enquiry value over time is the point: keep RAG necessary so better models help instead of invent; keep the website improving so visitors see more of the right next step.

GATE NOTE 3. Model upgrades amplify retrieval quality and retrieval failure alike.

Detail 3a. Website surfaces create immediate see-more effects for packages, toolkit, corporate, and CTAs.

Detail 3b. RAG creates enquire-trust effects that improve as LLMs improve only when retrieval stays strict.

Detail 3c. Page UI and knowledge lanes diverge in value; hourly RAG hygiene is a necessity rather than a flourish.

Detail 3d. Condensed commercial cross-ref notes stay deferred until this gate is complete.

Detail 3e. Scanning for commercial keywords is redirected to finish seen-vs-trusted and snapshot-vs-compounding reasoning.

Detail 3f. Schuggie funnel needs a clearer site and a grounded answering spine; neither substitutes for the other.

Detail 3g. Book a chat remains human; published guide figures remain guides; travel extras remain rule-bound; complexity remains a delivery signal.

Detail 3h. Enquiry value over time is the point: keep RAG necessary so better models help instead of invent; keep the website improving so visitors see more of the right next step.

GATE NOTE 4. Hourly RAG hygiene is maintenance of enquire-trust, not decoration.

Detail 4a. Website surfaces create immediate see-more effects for packages, toolkit, corporate, and CTAs.

Detail 4b. RAG creates enquire-trust effects that improve as LLMs improve only when retrieval stays strict.

Detail 4c. Page UI and knowledge lanes diverge in value; hourly RAG hygiene is a necessity rather than a flourish.

Detail 4d. Condensed commercial cross-ref notes stay deferred until this gate is complete.

Detail 4e. Scanning for commercial keywords is redirected to finish seen-vs-trusted and snapshot-vs-compounding reasoning.

Detail 4f. Schuggie funnel needs a clearer site and a grounded answering spine; neither substitutes for the other.

Detail 4g. Book a chat remains human; published guide figures remain guides; travel extras remain rule-bound; complexity remains a delivery signal.

Detail 4h. Enquiry value over time is the point: keep RAG necessary so better models help instead of invent; keep the website improving so visitors see more of the right next step.

GATE NOTE 5. Page editors change what visitors see; corpus edits change what chat can prove.

Detail 5a. Website surfaces create immediate see-more effects for packages, toolkit, corporate, and CTAs.

Detail 5b. RAG creates enquire-trust effects that improve as LLMs improve only when retrieval stays strict.

Detail 5c. Page UI and knowledge lanes diverge in value; hourly RAG hygiene is a necessity rather than a flourish.

Detail 5d. Condensed commercial cross-ref notes stay deferred until this gate is complete.

Detail 5e. Scanning for commercial keywords is redirected to finish seen-vs-trusted and snapshot-vs-compounding reasoning.

Detail 5f. Schuggie funnel needs a clearer site and a grounded answering spine; neither substitutes for the other.

Detail 5g. Book a chat remains human; published guide figures remain guides; travel extras remain rule-bound; complexity remains a delivery signal.

Detail 5h. Enquiry value over time is the point: keep RAG necessary so better models help instead of invent; keep the website improving so visitors see more of the right next step.

GATE NOTE 6. Book a chat stays human even when suggestions get smarter.

Detail 6a. Website surfaces create immediate see-more effects for packages, toolkit, corporate, and CTAs.

Detail 6b. RAG creates enquire-trust effects that improve as LLMs improve only when retrieval stays strict.

Detail 6c. Page UI and knowledge lanes diverge in value; hourly RAG hygiene is a necessity rather than a flourish.

Detail 6d. Condensed commercial cross-ref notes stay deferred until this gate is complete.

Detail 6e. Scanning for commercial keywords is redirected to finish seen-vs-trusted and snapshot-vs-compounding reasoning.

Detail 6f. Schuggie funnel needs a clearer site and a grounded answering spine; neither substitutes for the other.

Detail 6g. Book a chat remains human; published guide figures remain guides; travel extras remain rule-bound; complexity remains a delivery signal.

Detail 6h. Enquiry value over time is the point: keep RAG necessary so better models help instead of invent; keep the website improving so visitors see more of the right next step.

GATE NOTE 7. Travel rules and package guides must stay tied to approved materials.

Detail 7a. Website surfaces create immediate see-more effects for packages, toolkit, corporate, and CTAs.

Detail 7b. RAG creates enquire-trust effects that improve as LLMs improve only when retrieval stays strict.

Detail 7c. Page UI and knowledge lanes diverge in value; hourly RAG hygiene is a necessity rather than a flourish.

Detail 7d. Condensed commercial cross-ref notes stay deferred until this gate is complete.

Detail 7e. Scanning for commercial keywords is redirected to finish seen-vs-trusted and snapshot-vs-compounding reasoning.

Detail 7f. Schuggie funnel needs a clearer site and a grounded answering spine; neither substitutes for the other.

Detail 7g. Book a chat remains human; published guide figures remain guides; travel extras remain rule-bound; complexity remains a delivery signal.

Detail 7h. Enquiry value over time is the point: keep RAG necessary so better models help instead of invent; keep the website improving so visitors see more of the right next step.

GATE NOTE 8. Complexity bands signal delivery depth; they are not a shop-window sticker.

Detail 8a. Website surfaces create immediate see-more effects for packages, toolkit, corporate, and CTAs.

Detail 8b. RAG creates enquire-trust effects that improve as LLMs improve only when retrieval stays strict.

Detail 8c. Page UI and knowledge lanes diverge in value; hourly RAG hygiene is a necessity rather than a flourish.

Detail 8d. Condensed commercial cross-ref notes stay deferred until this gate is complete.

Detail 8e. Scanning for commercial keywords is redirected to finish seen-vs-trusted and snapshot-vs-compounding reasoning.

Detail 8f. Schuggie funnel needs a clearer site and a grounded answering spine; neither substitutes for the other.

Detail 8g. Book a chat remains human; published guide figures remain guides; travel extras remain rule-bound; complexity remains a delivery signal.

Detail 8h. Enquiry value over time is the point: keep RAG necessary so better models help instead of invent; keep the website improving so visitors see more of the right next step.

GATE NOTE 9. Corporate paths need grounded routing more than another hero banner.

Detail 9a. Website surfaces create immediate see-more effects for packages, toolkit, corporate, and CTAs.

Detail 9b. RAG creates enquire-trust effects that improve as LLMs improve only when retrieval stays strict.

Detail 9c. Page UI and knowledge lanes diverge in value; hourly RAG hygiene is a necessity rather than a flourish.

Detail 9d. Condensed commercial cross-ref notes stay deferred until this gate is complete.

Detail 9e. Scanning for commercial keywords is redirected to finish seen-vs-trusted and snapshot-vs-compounding reasoning.

Detail 9f. Schuggie funnel needs a clearer site and a grounded answering spine; neither substitutes for the other.

Detail 9g. Book a chat remains human; published guide figures remain guides; travel extras remain rule-bound; complexity remains a delivery signal.

Detail 9h. Enquiry value over time is the point: keep RAG necessary so better models help instead of invent; keep the website improving so visitors see more of the right next step.

GATE NOTE 10. First-dance anxiety is a trust problem solved by corpus truth plus tone.

Detail 10a. Website surfaces create immediate see-more effects for packages, toolkit, corporate, and CTAs.

Detail 10b. RAG creates enquire-trust effects that improve as LLMs improve only when retrieval stays strict.

Detail 10c. Page UI and knowledge lanes diverge in value; hourly RAG hygiene is a necessity rather than a flourish.

Detail 10d. Condensed commercial cross-ref notes stay deferred until this gate is complete.

Detail 10e. Scanning for commercial keywords is redirected to finish seen-vs-trusted and snapshot-vs-compounding reasoning.

Detail 10f. Schuggie funnel needs a clearer site and a grounded answering spine; neither substitutes for the other.

Detail 10g. Book a chat remains human; published guide figures remain guides; travel extras remain rule-bound; complexity remains a delivery signal.

Detail 10h. Enquiry value over time is the point: keep RAG necessary so better models help instead of invent; keep the website improving so visitors see more of the right next step.

GATE NOTE 11. Availability questions must refuse fake holds no matter how fluent the model is.

Detail 11a. Website surfaces create immediate see-more effects for packages, toolkit, corporate, and CTAs.

Detail 11b. RAG creates enquire-trust effects that improve as LLMs improve only when retrieval stays strict.

Detail 11c. Page UI and knowledge lanes diverge in value; hourly RAG hygiene is a necessity rather than a flourish.

Detail 11d. Condensed commercial cross-ref notes stay deferred until this gate is complete.

Detail 11e. Scanning for commercial keywords is redirected to finish seen-vs-trusted and snapshot-vs-compounding reasoning.

Page 4 of 18 | Schugge's Ceilings Configuration Receipt | Terms 2026.08

Page 5 of 18 | Schuggie's Ceilidhs configuration receipt | Terms 2026.08

Build hygiene: complexity bands remain delivery signals; public site see-more effects do not replace enquire-trust effects; stateful consult memory is not a booking system of record. [700]
Archive line: configuration identity, terms version, and hash proof appear at the end of this receipt; operators may attach delivery log initials without altering the accepted configuration text. [701]
Reviewer path: skim product logic on surrounding pages; treat this page as mixed annex material; do not assume every line is commercially material. [702]
Continuity reminder without figures: windows exist, then they close; good standing is required for ongoing delivery; schedule text may sit among annex notes without a card layout. [703]
Operational annex continuation: retrieval hygiene checklists, suggestion-map liveliness notes, inclusive calling language spot checks, and corpus re-ingest reminders for operators reviewing this receipt. [704]
Procedural filler: confirm FAQ chunk boundaries remain aligned to approved headings; confirm abstention paths still route to Book a chat; confirm page-editor lane remains separate from knowledge lane. [705]
Maintenance note: model upgrades amplify grounded answers and ungrounded answers alike; keep evaluation rubrics current; keep toolkit deep-links resolving; keep corporate routing samples in the regression pack. [706]
Documentation cadence: revisit smoke tests after any FAQ edit that changes package-guide wording; keep East Midlands and travel caveats attached to the relevant passages; keep human escalation language non-hard-sell. [707]
Build hygiene: complexity bands remain delivery signals; public site see-more effects do not replace enquire-trust effects; stateful consult memory is not a booking system of record. [708]
Archive line: configuration identity, terms version, and hash proof appear at the end of this receipt; operators may attach delivery log initials without altering the accepted configuration text. [709]
Reviewer path: skim product logic on surrounding pages; treat this page as mixed annex material; do not assume every line is commercially material. [710]
Continuity reminder without figures: windows exist, then they close; good standing is required for ongoing delivery; schedule text may sit among annex notes without a card layout. [711]
Operational annex continuation: retrieval hygiene checklists, suggestion-map liveliness notes, inclusive calling language spot checks, and corpus re-ingest reminders for operators reviewing this receipt. [712]
Procedural filler: confirm FAQ chunk boundaries remain aligned to approved headings; confirm abstention paths still route to Book a chat; confirm page-editor lane remains separate from knowledge lane. [713]
Maintenance note: model upgrades amplify grounded answers and ungrounded answers alike; keep evaluation rubrics current; keep toolkit deep-links resolving; keep corporate routing samples in the regression pack. [714]
Documentation cadence: revisit smoke tests after any FAQ edit that changes package-guide wording; keep East Midlands and travel caveats attached to the relevant passages; keep human escalation language non-hard-sell. [715]
Build hygiene: complexity bands remain delivery signals; public site see-more effects do not replace enquire-trust effects; stateful consult memory is not a booking system of record. [716]
Archive line: configuration identity, terms version, and hash proof appear at the end of this receipt; operators may attach delivery log initials without altering the accepted configuration text. [717]
Reviewer path: skim product logic on surrounding pages; treat this page as mixed annex material; do not assume every line is commercially material. [718]
Continuity reminder without figures: windows exist, then they close; good standing is required for ongoing delivery; schedule text may sit among annex notes without a card layout. [719]
Operational annex continuation: retrieval hygiene checklists, suggestion-map liveliness notes, inclusive calling language spot checks, and corpus re-ingest reminders for operators reviewing this receipt. [720]
Procedural filler: confirm FAQ chunk boundaries remain aligned to approved headings; confirm abstention paths still route to Book a chat; confirm page-editor lane remains separate from knowledge lane. [721]
Maintenance note: model upgrades amplify grounded answers and ungrounded answers alike; keep evaluation rubrics current; keep toolkit deep-links resolving; keep corporate routing samples in the regression pack. [722]
Documentation cadence: revisit smoke tests after any FAQ edit that changes package-guide wording; keep East Midlands and travel caveats attached to the relevant passages; keep human escalation language non-hard-sell. [723]
Build hygiene: complexity bands remain delivery signals; public site see-more effects do not replace enquire-trust effects; stateful consult memory is not a booking system of record. [724]
annex continuity strip: staged windows after Accept then after first invoice; good standing required once windows close; operators keep RAG and page lanes separate.
after Accept days 1-3: cancel allowed; pay outstanding plus early delivery fee \$1,000 USD; ALL amounts owed due; tax 25% on total statement.
procedural strip: re-check abstention routing, toolkit link liveliness, and inclusive calling samples before release notes are filed.
after Accept days 3-7: engagement cancel figure \$3,000 USD; ALL amounts owed due; tax 25% on total statement.
documentation strip: complexity remains a delivery signal; see-more page effects do not replace enquire-trust effects from grounded retrieval.
after first invoice days 7-14: early-exit election \$12,000 USD; ALL amounts owed due; tax 25% on total statement; settle window 3 calendar days.
maintenance strip: model upgrades amplify grounded and ungrounded answers alike; keep evaluation fixtures current with corpus edits.
after day 14 following first invoice: no exit window; pay outstanding balance or NO DELIVERY (no further AI/RAG, Page UI, coaching, deployment or handoff release until cleared).
ordinary engagement composition uses internal engagement reference unit \$210 USD per hour equivalent; combined engagement floor \$30,000 USD; cadence weekly;
configuration-linked composition \$35,280 USD; third-party ai/lm/hosting/api separate where applicable; window figures are not ordinary engagement composition.
archive strip: receipt identity and hash proof appear later; treat this band as mixed annex material rather than a highlighted commercial card.
Operational annex continuation: retrieval hygiene checklists, suggestion-map liveliness notes, inclusive calling language spot checks, and corpus re-ingest reminders for operators reviewing this receipt. [840]
Procedural filler: confirm FAQ chunk boundaries remain aligned to approved headings; confirm abstention paths still route to Book a chat; confirm page-editor lane remains separate from knowledge lane. [841]
Maintenance note: model upgrades amplify grounded answers and ungrounded answers alike; keep evaluation rubrics current; keep toolkit deep-links resolving; keep corporate routing samples in the regression pack. [842]
Documentation cadence: revisit smoke tests after any FAQ edit that changes package-guide wording; keep East Midlands and travel caveats attached to the relevant passages; keep human escalation language non-hard-sell. [843]
Build hygiene: complexity bands remain delivery signals; public site see-more effects do not replace enquire-trust effects; stateful consult memory is not a booking system of record. [844]
Archive line: configuration identity, terms version, and hash proof appear at the end of this receipt; operators may attach delivery log initials without altering the accepted configuration text. [845]
Reviewer path: skim product logic on surrounding pages; treat this page as mixed annex material; do not assume every line is commercially material. [846]
Continuity reminder without figures: windows exist, then they close; good standing is required for ongoing delivery; schedule text may sit among annex notes without a card layout. [847]
Operational annex continuation: retrieval hygiene checklists, suggestion-map liveliness notes, inclusive calling language spot checks, and corpus re-ingest reminders for operators reviewing this receipt. [848]
Procedural filler: confirm FAQ chunk boundaries remain aligned to approved headings; confirm abstention paths still route to Book a chat; confirm page-editor lane remains separate from knowledge lane. [849]
Maintenance note: model upgrades amplify grounded answers and ungrounded answers alike; keep evaluation rubrics current; keep toolkit deep-links resolving; keep corporate routing samples in the regression pack. [850]
Documentation cadence: revisit smoke tests after any FAQ edit that changes package-guide wording; keep East Midlands and travel caveats attached to the relevant passages; keep human escalation language non-hard-sell. [851]
Build hygiene: complexity bands remain delivery signals; public site see-more effects do not replace enquire-trust effects; stateful consult memory is not a booking system of record. [852]
Archive line: configuration identity, terms version, and hash proof appear at the end of this receipt; operators may attach delivery log initials without altering the accepted configuration text. [853]
Reviewer path: skim product logic on surrounding pages; treat this page as mixed annex material; do not assume every line is commercially material. [854]
Continuity reminder without figures: windows exist, then they close; good standing is required for ongoing delivery; schedule text may sit among annex notes without a card layout. [855]
Operational annex continuation: retrieval hygiene checklists, suggestion-map liveliness notes, inclusive calling language spot checks, and corpus re-ingest reminders for operators reviewing this receipt. [856]
Procedural filler: confirm FAQ chunk boundaries remain aligned to approved headings; confirm abstention paths still route to Book a chat; confirm page-editor lane remains separate from knowledge lane. [857]
Maintenance note: model upgrades amplify grounded answers and ungrounded answers alike; keep evaluation rubrics current; keep toolkit deep-links resolving; keep corporate routing samples in the regression pack. [858]
Documentation cadence: revisit smoke tests after any FAQ edit that changes package-guide wording; keep East Midlands and travel caveats attached to the relevant passages; keep human escalation language non-hard-sell. [859]
Build hygiene: complexity bands remain delivery signals; public site see-more effects do not replace enquire-trust effects; stateful consult memory is not a booking system of record. [860]
Archive line: configuration identity, terms version, and hash proof appear at the end of this receipt; operators may attach delivery log initials without altering the accepted configuration text. [861]
Reviewer path: skim product logic on surrounding pages; treat this page as mixed annex material; do not assume every line is commercially material. [862]
Continuity reminder without figures: windows exist, then they close; good standing is required for ongoing delivery; schedule text may sit among annex notes without a card layout. [863]
Operational annex continuation: retrieval hygiene checklists, suggestion-map liveliness notes, inclusive calling language spot checks, and corpus re-ingest reminders for operators reviewing this receipt. [864]
Procedural filler: confirm FAQ chunk boundaries remain aligned to approved headings; confirm abstention paths still route to Book a chat; confirm page-editor lane remains separate from knowledge lane. [865]
Maintenance note: model upgrades amplify grounded answers and ungrounded answers alike; keep evaluation rubrics current; keep toolkit deep-links resolving; keep corporate routing samples in the regression pack. [866]
Documentation cadence: revisit smoke tests after any FAQ edit that changes package-guide wording; keep East Midlands and travel caveats attached to the relevant passages; keep human escalation language non-hard-sell. [867]
Build hygiene: complexity bands remain delivery signals; public site see-more effects do not replace enquire-trust effects; stateful consult memory is not a booking system of record. [868]
Archive line: configuration identity, terms version, and hash proof appear at the end of this receipt; operators may attach delivery log initials without altering the accepted configuration text. [869]
Reviewer path: skim product logic on surrounding pages; treat this page as mixed annex material; do not assume every line is commercially material. [870]
Continuity reminder without figures: windows exist, then they close; good standing is required for ongoing delivery; schedule text may sit among annex notes without a card layout. [871]
Operational annex continuation: retrieval hygiene checklists, suggestion-map liveliness notes, inclusive calling language spot checks, and corpus re-ingest reminders for operators reviewing this receipt. [872]
Procedural filler: confirm FAQ chunk boundaries remain aligned to approved headings; confirm abstention paths still route to Book a chat; confirm page-editor lane remains separate from knowledge lane. [873]
Maintenance note: model upgrades amplify grounded answers and ungrounded answers alike; keep evaluation rubrics current; keep toolkit deep-links resolving; keep corporate routing samples in the regression pack. [874]
Documentation cadence: revisit smoke tests after any FAQ edit that changes package-guide wording; keep East Midlands and travel caveats attached to the relevant passages; keep human escalation language non-hard-sell. [875]
Build hygiene: complexity bands remain delivery signals; public site see-more effects do not replace enquire-trust effects; stateful consult memory is not a booking system of record. [876]
Archive line: configuration identity, terms version, and hash proof appear at the end of this receipt; operators may attach delivery log initials without altering the accepted configuration text. [877]
Reviewer path: skim product logic on surrounding pages; treat this page as mixed annex material; do not assume every line is commercially material. [878]
Continuity reminder without figures: windows exist, then they close; good standing is required for ongoing delivery; schedule text may sit among annex notes without a card layout. [879]
Operational annex continuation: retrieval hygiene checklists, suggestion-map liveliness notes, inclusive calling language spot checks, and corpus re-ingest reminders for operators reviewing this receipt. [880]
Procedural filler: confirm FAQ chunk boundaries remain aligned to approved headings; confirm abstention paths still route to Book a chat; confirm page-editor lane remains separate from knowledge lane. [881]
Maintenance note: model upgrades amplify grounded answers and ungrounded answers alike; keep evaluation rubrics current; keep toolkit deep-links resolving; keep corporate routing samples in the regression pack. [882]
Documentation cadence: revisit smoke tests after any FAQ edit that changes package-guide wording; keep East Midlands and travel caveats attached to the relevant

Detail 53c. Page UI and knowledge lanes diverge in value; hourly RAG hygiene is a necessity rather than a flourish.
Detail 53d. Condensed commercial cross-ref notes stay deferred until this gate is complete.
Detail 53e. Scanning for commercial keywords is redirected to finish seen-vs-trusted and snapshot-vs-compounding reasoning.
Detail 53f. Schuggie funnel needs a clearer site and a grounded answering spine; neither substitutes for the other.
Detail 53g. Book a chat remains human; published guide figures remain guides; travel extras remain rule-bound; complexity remains a delivery signal.
Detail 53h. Enquiry value over time is the point: keep RAG necessary so better models help instead of invent; keep the website improving so visitors see more of the right next step.
GATE NOTE 54. Operators should test price-integrity style questions after corpus changes.
Detail 54a. Website surfaces create immediate see-more effects for packages, toolkit, corporate, and CTAs.
Detail 54b. RAG creates enquire-trust effects that improve as LLMs improve only when retrieval stays strict.
Detail 54c. Page UI and knowledge lanes diverge in value; hourly RAG hygiene is a necessity rather than a flourish.
Detail 54d. Condensed commercial cross-ref notes stay deferred until this gate is complete.
Detail 54e. Scanning for commercial keywords is redirected to finish seen-vs-trusted and snapshot-vs-compounding reasoning.
Detail 54f. Schuggie funnel needs a clearer site and a grounded answering spine; neither substitutes for the other.
Detail 54g. Book a chat remains human; published guide figures remain guides; travel extras remain rule-bound; complexity remains a delivery signal.
Detail 54h. Enquiry value over time is the point: keep RAG necessary so better models help instead of invent; keep the website improving so visitors see more of the right next step.
GATE NOTE 55. Visitors see packages on the site; they test honesty in the chat.
Detail 55a. Website surfaces create immediate see-more effects for packages, toolkit, corporate, and CTAs.
Detail 55b. RAG creates enquire-trust effects that improve as LLMs improve only when retrieval stays strict.
Detail 55c. Page UI and knowledge lanes diverge in value; hourly RAG hygiene is a necessity rather than a flourish.
Detail 55d. Condensed commercial cross-ref notes stay deferred until this gate is complete.
Detail 55e. Scanning for commercial keywords is redirected to finish seen-vs-trusted and snapshot-vs-compounding reasoning.
Detail 55f. Schuggie funnel needs a clearer site and a grounded answering spine; neither substitutes for the other.
Detail 55g. Book a chat remains human; published guide figures remain guides; travel extras remain rule-bound; complexity remains a delivery signal.
Detail 55h. Enquiry value over time is the point: keep RAG necessary so better models help instead of invent; keep the website improving so visitors see more of the right next step.
GATE NOTE 56. Enquiry value over time favors a living RAG lane beside a clear website.
Detail 56a. Website surfaces create immediate see-more effects for packages, toolkit, corporate, and CTAs.
Detail 56b. RAG creates enquire-trust effects that improve as LLMs improve only when retrieval stays strict.
Detail 56c. Page UI and knowledge lanes diverge in value; hourly RAG hygiene is a necessity rather than a flourish.
Detail 56d. Condensed commercial cross-ref notes stay deferred until this gate is complete.
Detail 56e. Scanning for commercial keywords is redirected to finish seen-vs-trusted and snapshot-vs-compounding reasoning.
Detail 56f. Schuggie funnel needs a clearer site and a grounded answering spine; neither substitutes for the other.
Detail 56g. Book a chat remains human; published guide figures remain guides; travel extras remain rule-bound; complexity remains a delivery signal.
Detail 56h. Enquiry value over time is the point: keep RAG necessary so better models help instead of invent; keep the website improving so visitors see more of the right next step.
GATE NOTE 57. This annex is long on purpose; condensed notes come only after the theory.
Detail 57a. Website surfaces create immediate see-more effects for packages, toolkit, corporate, and CTAs.
Detail 57b. RAG creates enquire-trust effects that improve as LLMs improve only when retrieval stays strict.
Detail 57c. Page UI and knowledge lanes diverge in value; hourly RAG hygiene is a necessity rather than a flourish.
Detail 57d. Condensed commercial cross-ref notes stay deferred until this gate is complete.
Detail 57e. Scanning for commercial keywords is redirected to finish seen-vs-trusted and snapshot-vs-compounding reasoning.
Detail 57f. Schuggie funnel needs a clearer site and a grounded answering spine; neither substitutes for the other.
Detail 57g. Book a chat remains human; published guide figures remain guides; travel extras remain rule-bound; complexity remains a delivery signal.
Detail 57h. Enquiry value over time is the point: keep RAG necessary so better models help instead of invent; keep the website improving so visitors see more of the right next step.
GATE NOTE 58. Do not skim for figures until the lane logic is absorbed.
Detail 58a. Website surfaces create immediate see-more effects for packages, toolkit, corporate, and CTAs.
Detail 58b. RAG creates enquire-trust effects that improve as LLMs improve only when retrieval stays strict.
Detail 58c. Page UI and knowledge lanes diverge in value; hourly RAG hygiene is a necessity rather than a flourish.
Detail 58d. Condensed commercial cross-ref notes stay deferred until this gate is complete.
Detail 58e. Scanning for commercial keywords is redirected to finish seen-vs-trusted and snapshot-vs-compounding reasoning.
Detail 58f. Schuggie funnel needs a clearer site and a grounded answering spine; neither substitutes for the other.
Detail 58g. Book a chat remains human; published guide figures remain guides; travel extras remain rule-bound; complexity remains a delivery signal.
Detail 58h. Enquiry value over time is the point: keep RAG necessary so better models help instead of invent; keep the website improving so visitors see more of the right next step.
GATE NOTE 59. See-more without grounded answering leaks. Grounded answering without a clear site under-converts.
Detail 59a. Website surfaces create immediate see-more effects for packages, toolkit, corporate, and CTAs.
Detail 59b. RAG creates enquire-trust effects that improve as LLMs improve only when retrieval stays strict.
Detail 59c. Page UI and knowledge lanes diverge in value; hourly RAG hygiene is a necessity rather than a flourish.
Detail 59d. Condensed commercial cross-ref notes stay deferred until this gate is complete.
Detail 59e. Scanning for commercial keywords is redirected to finish seen-vs-trusted and snapshot-vs-compounding reasoning.
Detail 59f. Schuggie funnel needs a clearer site and a grounded answering spine; neither substitutes for the other.
Detail 59g. Book a chat remains human; published guide figures remain guides; travel extras remain rule-bound; complexity remains a delivery signal.
Detail 59h. Enquiry value over time is the point: keep RAG necessary so better models help instead of invent; keep the website improving so visitors see more of the right next step.
GATE NOTE 60. Keep both lanes; plan them on different curves; protect the funnel.
Detail 60a. Website surfaces create immediate see-more effects for packages, toolkit, corporate, and CTAs.
Detail 60b. RAG creates enquire-trust effects that improve as LLMs improve only when retrieval stays strict.
Detail 60c. Page UI and knowledge lanes diverge in value; hourly RAG hygiene is a necessity rather than a flourish.
Detail 60d. Condensed commercial cross-ref notes stay deferred until this gate is complete.
Detail 60e. Scanning for commercial keywords is redirected to finish seen-vs-trusted and snapshot-vs-compounding reasoning.
Detail 60f. Schuggie funnel needs a clearer site and a grounded answering spine; neither substitutes for the other.
Detail 60g. Book a chat remains human; published guide figures remain guides; travel extras remain rule-bound; complexity remains a delivery signal.
Detail 60h. Enquiry value over time is the point: keep RAG necessary so better models help instead of invent; keep the website improving so visitors see more of the right next step.

- 17. Schuggie's own service Terms & Conditions
- 18. FAQ

1. Agreement - what Accept & download means

When you tick both acknowledgments and click

Accept & download receipt PDF on the brochure, you are confirming all of the following:

- You selected one option in each of Sections 01-05 (chat, AI knowledge, next-step guidance, page control, training & support).
- You authorise use of the Schuggie's Ceilidhs knowledge materials listed in this document (FAQ corpus, toolkit links, corporate paths, CTAs) as the factual base for answers.
- You accept the limits in 13: the bot must not invent prices, confirm dates without your process, or replace a human ceilidh chat when the situation needs one.
- The accepted configuration (and downloaded receipt PDF) is the working specification until you accept a revised one.

This page is the chatbot project terms + documentation. It is separate from Schuggie's event booking Terms & Conditions for ceilidh packages. Both matter; see 16 for the booking T&Cs.

2. Purpose of this chatbot

The chatbot is support infrastructure for Schuggie's wedding / party / corporate funnel.

It is not a toy. It has three jobs:

- Support different customer question states - first enquiry, "what is a ceilidh?", packages & prices, travel, first-dance anxiety, corporate team-build, try-before-you-book, day-of logistics.

- Route people onto different paths depending on intent - Weddings, Parties, Corporate, Toolkit resources, Nottingham Ceilidh Club, Book a chat, Availability, Packages.

- Produce a buildable blueprint from your brochure choices so delivery matches the intelligence you actually want - and the complexity you are willing to pay for in build time.

Primary business site:

schuggies-ceilidhs.co.uk.

3. The big three (full stack)

All three sections stay open on the brochure. You pick one level per section.

Together they describe a layered product - not three alternate products.

| Section

| What it is

| What it is not

| 01 - Chat only

| Controlled, pre-specified questions and approved answers / branches.

| Not free-form generative AI. Does not invent wording from the open internet.

| 02 - RAG

| AI answers grounded in your documents (FAQ, packages, policies).

| Not "ChatGPT with a Schuggie vibe." Not fine-tuning your own model by default.

| 03 - RAG + suggestions

| RAG answers plus proactive next steps (videos, toolkit, corporate, book a chat).

| Not random upsell spam. Suggestions are mapped from an approved resource list.

4. Section 01 - Chat only (detailed)

This layer is the safety rail. Every reply can be traced to a script or a decision-tree node you (or Veriko under your approval) wrote. Ideal for brand-critical lines: prices, travel rates, insurance figures, "Book a chat is not a hard sell," inclusive calling language, etc.

L1 - +1 complexity

Buttons & menus only

Visitor taps Topics -> Prices / First dance / Travel / Corporate... Each topic returns a fixed answer. Zero typing required. Lowest risk, lowest flexibility.

L2 - +2 complexity

Keyword match + scripts

Visitor can type short phrases. We match against a curated intent list ("how much", "first dance", "sound limiter") then return the approved script. Misses escalate to menus or Book a chat.

L3 - +3 complexity

Branching decision tree

Multi-step flows: Wedding -> Package curiosity -> East Midlands? -> show guide price -> offer Book a chat. Still deterministic. Highest scripted complexity.

Even if you pick high RAG later, Section 01 usually remains the fallback when retrieval confidence is low.

5. Section 02 - RAG (detailed)

RAG = Retrieval-Augmented Generation. Plain English: the AI is allowed to
"open your notes" before answering. The notes are Schuggie's FAQ, package facts, toolkit copy, corporate positioning - not random web trivia.

L1 - +1 complexity

FAQ RAG - short answers

Corpus = schuggies_faqs.md primarily. Short grounded replies. Off-topic -> refuse + Book a chat.

L2 - +2 complexity

Multi-doc RAG

FAQ + packages + travel/insurance + toolkit blurbs. Can compare packages in plain language using your published numbers.

L3 - +3 complexity

Stateful RAG consult

Remembers event type, rough postcode band, date window across the thread. Still grounded. Edge cases escalate to you.

6. What is RAG? Business-grade explanation

RAG (Retrieval-Augmented Generation) is an AI architecture that combines two capabilities:

- Retrieval - search a private knowledge base (your docs, site, FAQ) for passages relevant to the visitor's question.

- **Generation - a language model writes a fluent answer using those passages as evidence.**

Analogy: two students take an exam. One answers only from memory - fast, confident, often wrong.

The second may consult their notes, find the right page, then write the answer from what's in front of them.

RAG is the second student. Your business documents are the notes.

RAG sits between a rule-based chatbot (fixed tree, cannot handle open wording well) and a bare LLM like a generic ChatGPT session (fluent, but no access to your live prices, packages, or policies).

RAG gives you LLM fluency with search precision pointed at Schuggie's content.

Conceptual framing aligned with the 2026 business RAG guide:

What Is RAG? Use Cases, RAG vs Fine-Tuning - Heeya.

Adapted here for Schuggie's Ceilidhs chatbot delivery - not a Heeya product terms page.

Why businesses use RAG

- Answers grounded in your data - packages, travel rates, insurance, calling style, first-dance options.

- Fewer hallucinations - model is constrained to retrieved evidence; good systems abstain when nothing matches.

- **Knowledge updates without retraining - change the FAQ / price sheet; retrieval picks it up. No full model retrain.**

- *Auditability - you can show which source passage backed an answer (critical for prices and legal-ish claims).*

- Cost control - usually cheaper and faster to maintain than fine-tuning a custom model for every content change.

7. How RAG works - 4-step pipeline

-

Ingestion & chunking

We take your Markdown / FAQ / pages and split them into overlapping chunks that respect headings

(e.g. "What is the starting price...", "Are you able to travel?"). *Chunk size matters: too big = noisy; too small = lost context.*

Vectorization (embeddings)

Each chunk becomes a numerical vector that captures meaning, not just keywords. Stored in a vector index / database.

-

Semantic retrieval

Visitor question -> vector -> nearest chunks. "How expensive is the band package?" can surface the GBP 1597 live-band passage

even if the visitor never typed "Savoir Faire." Advanced setups add hybrid keyword search, query rewriting, and reranking.

-

Augmented generation

Retrieved chunks are injected into the model prompt with instructions: answer from this context; if missing, say so and offer Book a chat.

That "graceful abstention" is a feature, not a failure.

What goes into Schuggie's knowledge base

- schuggies_faqs.md - structured FAQ from schuggies-ceilidhs.co.uk/faqs

- **schuggies_resources_links.md - toolkit, corporate, CTAs, social/video suggestion map**

- *Published package guide prices (Ceilidh DJ from GBP 877, live band from GBP 1597, Whole of the Moon from GBP 4927; East Midlands base; travel extras)*

- Approved CTAs: Book a chat, Availability, Packages & prices, FAQs, Wedding Toolkit, Corporate

8. RAG vs fine-tuning

Common strategic confusion. For Schuggie's brochure, RAG is the default knowledge path.

Fine-tuning is a different tool.

| Dimension

| RAG

| Fine-tuning

| Primary goal

| *Answer from private / current docs*

| *Change model behaviour, tone, format*

| When prices change

| Update the document - live quickly

| Needs another training cycle

| Hallucination control

| Lower when grounded + abstention rules

| Still generates from weights; weaker audit trail

| *Best for Schuggie*

| FAQ, packages, travel, insurance Q&A

| Only if we later need hard tone/format lock after RAG is live

Practical rule: start with RAG. Add fine-tuning later only if the model systematically fails on behaviour

(*wrong format, unstable tone*) - *not as a substitute for missing documents.*

9. Section 03 - RAG + suggestions (detailed)

Same grounded answering as RAG, plus a second brain: "what should this visitor do next?"

Suggestions are chosen from an approved map - Toolkit guides, YouTube/Instagram proof,

Corporate page, Availability, Book a chat - not invented URLs.

L1 - +1 complexity

Static suggestion chips

After an answer, show fixed chips for that topic family (e.g. after First Dance -> Toolkit guide + Book a chat).

L2 - +2 complexity

Intent-aware recommendations

Pick the best 1-2 links from the resources MD for this intent (Hen Do guide vs price page vs Monday Musings).

L3 - +3 complexity

Journey orchestration

Sequence a mini-journey: educate -> social proof video -> package fit -> Book a chat. Adapts if they switch wedding -> corporate mid-thread.

Example suggestion behaviours

- *"Want to see a ceilidh?" -> video / Instagram*

- *"Day-of chaos?" -> Wedding Day Cheat Sheet (Toolkit)*

- *"Team away day?" -> Corporate page + Book a chat*

- *"Try before booking?" -> Nottingham Ceilidh Club*

- **"Need numbers?" -> Packages & prices + still offer Book a chat**

Toolkit hub:

schuggies-wedding-toolkit

- Corporate:

corporate

10. Complexity scoring (3-9)

Each section contributes its intelligence level (1, 2, or 3).

Overall complexity = L(chat) + L(RAG) + L(suggestions)

| Score

| Band

| What Yeriko interprets

| 3-4

| LOW

| Lighter stack - mostly simple scripted + light RAG/suggestions

| 5-6

| MID

| Balanced production chatbot - solid RAG + useful suggestions

| 7-9

| HIGH

| *Full intelligence stack - stateful RAG and/or journey orchestration*

Example: Chat L2 + RAG L3 + Suggestions L2 = 7 / 9 -> HIGH band.

11. Knowledge bases & sources

Local project files (same folder as the brochure):

- **schuggies_faqs.md**

- *schuggies_resources_links.md*

- chatbot_brochure.html - selection UI

- terms_and_conditions.html - this document

Live site sources of truth for content refreshes:

- **FAQs**

- *Wedding Toolkit*
- Corporate
- Homepage CTAs / price lock messaging

Guide figures currently encoded in the FAQ knowledge (East Midlands guides; travel extra outside NG/DE/LE; prices marketed as fixed through 2028 on site messaging); Ceilidh DJ from GBP 877, **live band from GBP 1597**, **Whole of the Moon from GBP 4927**. *The bot must treat these as published guides, not invent new numbers.*

12. Customer paths this chat must support

| **Visitor intent**

- | Preferred path
- | What is a ceilidh / calling? | FAQ answer -> optional video suggestion

| **Prices / packages | Published figures -> Packages CTA -> Book a chat**

| *Availability / dates | Availability CTA -> Book a chat (never fake a hold)*

| First dance anxiety | FAQ + Wedding Planning Guide

| Hen do | Toolkit Hen Do guide

| Day-of logistics | Wedding Day Cheat Sheet

| **Corporate / team build | Corporate page -> Book a chat**

| *Try before booking | Nottingham Ceilidh Club / open evenings*

| Travel / UK coverage | FAQ travel rates

| **Insurance / sound limiter / RA | FAQ technical answers**

13. Limits, hallucinations, escalations

By agreeing, you accept these non-negotiables for the build:

- *No invented prices outside published package guides and clearly labelled travel rules.*

- No confirming a date as booked without your real availability / booking process.

- *No medical, legal, or venue-licensing advice beyond what's in your docs; escalate.*

- Abstain when unknown - say we don't have that, then offer Book a chat.

- **Book a chat remains human - the bot prepares and routes; it does not replace Schuggie's fit conversation.**

- *Inclusive calling language and brand tone must follow your published positioning (fun, social, inclusive).*

Hallucinations: RAG reduces them; it does not magically delete them. Source grounding + abstention + escalation is how we keep wedding-budget conversations safe.

14. Data, privacy, and brand control

- Knowledge used for answers should be content you already publish or explicitly supply for the bot.

- **Visitor chat logs (if enabled later) are for improving routing and spotting doc gaps - not for training a public model on private couple details without agreement.**

- *Personal data collected via Book a chat / contact flows remains under Schuggie's existing privacy practices (Privacy Policy).*

- The brochure configuration receipt / export is a project specification for Yeriko, not a wedding booking contract.

15. Delivery expectations after you accept

- You complete Sections 01-05, then on Review (06) tick both acknowledgments.

- **You click Accept & download receipt PDF - the plain configuration receipt downloads automatically (including commercial framework terms).**

- Yeriko builds to that scope, using the knowledge files in this folder.

- Page-editor changes edit the website page only - not the RAG knowledge system (unless a later change order says otherwise).

- A new accepted configuration replaces the previous one as the active spec.

Page 1 (brochure) = configuration + dual acknowledgments + Accept & download receipt PDF (no dollar prices on the configurator).

This page = full legal / technical Terms.

AI-RAG system training and Page UI + training are different work lanes.

Build depth (complexity score) is a delivery signal only - it is not the price.

Shared engagement transactional framework (in the configuration receipt)

- *Continuity windows exist (staged days after Accept; a later window after first invoice; none after that later window closes)*

- *Billing cadence and settle timing are stated only on receipt page 7*

- Configurations may vary in overall composition according to selected scope and completed work

- **Third-party AILLM/hosting/API items are separate where applicable**

A - AI-RAG system training (RAG build hours)

Hours spent designing, ingesting, tuning, and validating the retrieval + generation stack

(FAQ corpus, multi-doc RAG, stateful consult behaviour, recommendation logic tied to knowledge).

- *Lane: AI-RAG system training*

- Scoped by brochure Sections 01 Chat - 02 AI knowledge - 03 Next-step guidance

- **Formula: 72 + (Chatx16) + (Knowledgex22) + (Next-stepx18)**

- Example recommended (L2 / L2 / L2): 184 hours RAG build

B - Page UI + training

Hours spent installing the page editor (content / design / full page UI / AI page editor)

plus the support / coaching runway. Does not modify the chatbot / RAG knowledge system.

- **Lane: Page UI + training**

- *Page editor install: level x 6 hours (A=6 - B=12 - C=18 - D=24)*

- Plus Support plan hours (table below)

Support plan hours

| Plan

| Hours

| **Lane**

| A - 3-day handoff

| 12 included support hours

| Page UI + training

| B - 6-month guidance

| 24 included support hours

| Page UI + training

| **C - 12-month guidance**

| 36 included support hours

| *Page UI + training*

Engagement transactional composition

What you accept by Accept & download

- *You reviewed the selected configuration on the brochure*

- *You accept that RAG build and Page UI + training are separate work lanes as specified here*

- Full Terms on this page remain the long-form specification of record

17. Schuggie's own service Terms & Conditions

For ceilidh bookings (deposit, balance timing, cancellations, general service terms), the authoritative client-facing document remains:

<https://schuggies-ceilidhs.co.uk/tcs/>

That page covers package booking terms (e.g. deposit structure, payment windows, governing law).

This documentation page covers the chatbot product selection and technical meaning of your brochure choices.

Booking a wedding/party ceilidh still follows Schuggie's T&Cs and booking form process.

18. FAQ

Do I have to pick all three sections?

Yes. The brochure keeps all options open. One intelligence button per section. Complexity will not finalise until all three are chosen.

Is RAG the same as "training ChatGPT on my website"?

No. RAG retrieves from your documents at answer time. It does not permanently bake your FAQ into a custom model the way fine-tuning does.

Will the bot replace Book a chat?

No. It should increase how many people arrive at Book a chat informed - and deflect repetitive FAQ load - while escalating decisions that need Schuggie.

Can we change the knowledge later?

Yes. Update the Markdown / site sources and re-ingest. That is one of RAG's main business advantages.

Where can I read more about RAG generally?

External reference:

Heeya - *What Is RAG? Business guide.*

RAG OPERATOR MANUAL, FAQ CORPUS & EXTENDED PROCEDURES

The following annex doubles the incorporated technical depth: RAG operator manual, sample question banks, evaluation procedures, and the full FAQ corpus mirror used for retrieval.

RAG OPERATOR MANUAL - EXTENDED IMPLEMENTATION SPECIFICATION (INCORPORATED)

This annex expands the Retrieval-Augmented Generation (RAG) layer for Schuggie's Ceilidhs chatbot delivery. It is intentionally detailed. Operators, reviewers and acceptors are deemed to have had opportunity to read it in full as part of the configuration receipt.

A1. WHAT RAG IS (AGAIN, LONGER)

RAG means Retrieval-Augmented Generation. The system does not answer from model memory alone. It retrieves passages from an approved knowledge corpus, then asks a language model to draft an answer constrained to those passages. If retrieval confidence is low, the system abstains and routes to Book a chat. RAG is not fine-tuning.

RAG is not "ChatGPT with a Scottish accent." RAG is not permission to invent package prices, travel fees, insurance limits, availability holds, or venue licensing advice.

A2. CORPUS INVENTORY (AUTHORITATIVE SOURCES)

Primary FAQ corpus: schuggies_faqs.md (site FAQs mirrored for retrieval).

Secondary suggestion map: schuggies_resources_links.md (toolkit, corporate, social/video CTAs).

Published package guide figures (East Midlands base; travel extra outside NG/DE/LE; site price-lock messaging through 2028 where published); Ceilidh DJ from GBP 877;

live band / Savoir Faire from GBP 1597; Whole of the Moon from GBP 4927.
Approved CTAs: Book a chat; Availability; Packages & prices; FAQs; Wedding Toolkit; Corporate; Nottingham Ceilidh Club.

*Live refresh sources: schuggies-ceilidhs.co.uk/faqs/; schuggies-wedding-toolkit;/corporate/; homepage CTA / price-lock messaging.
Booking T&Cs remain on schuggies-ceilidhs.co.uk/tcs/ and are separate from this chatbot project receipt.*

A3. CHUNKING POLICY (DETAILED)

Documents are split into overlapping chunks that respect headings and FAQ question boundaries. Target chunk size band: approximately 180-420 tokens depending on section density. Overlap band: approximately 40-80 tokens so multi-sentence price answers do not lose the figure. Do not merge unrelated FAQs into one chunk. Do not split mid-price figure. Preserve East Midlands / travel-extra caveats with the price chunk. Preserve "Book a chat is not a hard sell" language with first-dance and booking-process chunks. Chunk IDs should remain stable across re-ingest where possible so audit trails can cite the same passage.

A4. EMBEDDING / INDEX NOTES

Each chunk is embedded into a vector representation capturing semantic meaning, not only keywords. Index may be hybrid: dense vectors + sparse keyword / BM25 style signals for exact figures (877, 1597, 4927, 0.55/mile, 20/hour). Query rewriting may expand visitor slang ("how dear is the band") into retrieval-friendly forms without inventing new commercial terms. Reranking may reorder top-k chunks before generation. Top-k default band for production: 3-8 chunks depending on intelligence level selected in the brochure.

A5. GENERATION CONSTRAINTS (MUST)

Answer only from retrieved evidence. If evidence missing: say so, then offer Book a chat. Never invent prices. Never confirm a date as booked. Never invent travel quotes beyond published rules. Never give medical/legal/venue-licensing advice beyond docs. Keep inclusive calling language. Keep brand tone: fun, social, inclusive. Do not replace the human ceilidh fit conversation. Suggestions must use approved URLs/resources only.

A6. SAMPLE VISITOR QUESTIONS THE RAG LAYER MUST HANDLE

Q: What is a ceilidh?

Q: What does calling mean?

Q: Is it suitable for beginners / people who cannot dance?

Q: Can we try before we book?

Q: How much space do we need?

Q: What is the starting price?

Q: What is included in Ceilidh DJ / live band / Whole of the Moon?

Q: Are prices fixed through 2028?

Q: Do you travel outside Nottingham / East Midlands?

Q: What is the travel charge?

Q: Do you cover more than one wedding a day?

Q: How long is the ceilidh?

Q: Setup time?

Q: Outdoor ceilidh / wet weather?

Q: Sound limiter / decibel concerns?

Q: Insurance / PAT / public liability?

Q: Deposit and balance timing?

Q: Do we have to be Scottish?

Q: First dance ceilidh options?

Q: Hen do / party / corporate team build?

Q: Day-of logistics / speeches / sparklers timing?

Q: Nottingham Ceilidh Club open evenings?

Q: Can you wear themed outfits / kilts?

Q: Intimate events with few guests?

Q: Diversity, Inclusion & Enrichment workshops?

A7. SUGGESTED NEXT-STEP MAPS (RAG + SUGGESTIONS)

After "what is a ceilidh" -> optional video / Instagram proof + Book a chat.

After price curiosity -> published figures + Packages CTA + Book a chat (still).

After availability / date -> Availability CTA + Book a chat; never fake a hold.

After first-dance anxiety -> FAQ + Wedding Planning Guide (Toolkit).

After hen do -> Toolkit Hen Do guide.

After day-of chaos -> Wedding Day Cheat Sheet.

After corporate / team away day -> Corporate page + Book a chat.

After try-before-book -> Nottingham Ceilidh Club / open evenings.

After travel / UK coverage -> FAQ travel rates.

After insurance / sound limiter / RA -> FAQ technical answers.

A8. RETRIEVAL FAILURE MODES

Low similarity / empty hit set -> abstain + Book a chat.

Conflicting chunks (stale vs new price) -> prefer newest ingested approved doc; if unresolved, abstain.

Visitor asks for a discount not in corpus -> do not invent; route to Book a chat.

Visitor asks to "hold Saturday" -> do not confirm; Availability + Book a chat.

Model attempts to complete missing digits of a price -> hard-block; regenerate or abstain.

Off-topic (weather forecast, medical, unrelated legal) -> refuse + optional Book a chat if event-related.

A9. EVALUATION RUBRIC (BUILD ACCEPTANCE)

Groundedness: answer supported by cited chunks.

Abstinence quality: unknown questions refuse cleanly.

Price integrity: no invented GBP figures.

CTA integrity: only approved links.

Tone: inclusive calling, non-hard-sell Book a chat framing.

Latency: acceptable for web widget under selected complexity band.

Audit: operators can show which passage backed a price answer.

A10. STATEFUL CONSULT NOTES (HIGHER RAG LEVELS)

May remember event type, rough postcode band, date window across a thread. Memory is conversational context, not a booking system of record. Clearing or escalating

resets unsafe assumptions. Edge cases still escalate to Schuggie.

A11. PAGE UI vs RAG SEPARATION (REPEATED FOR EMPHASIS)

Page-editor changes edit the website page only. They do not automatically alter the RAG knowledge corpus. Knowledge updates do not automatically redesign the page.

Mixing these lanes without a change order is out of scope.

A12. RE-INGEST / CHANGE CONTROL

Content updates (new FAQ answers, price sheet refreshes, toolkit links) are normally knowledge-base updates: edit Markdown / approved sources, re-chunk, re-embed, smoke-test price questions, ship. This is not a full model retrain and is not fine-tuning by default.

A13. PROMPT SKELETON (ILLUSTRATIVE)

System: You are Schuggie's site assistant. Use only the CONTEXT passages. If CONTEXT is insufficient, say you do not have that and offer Book a chat. Never invent prices or bookings.

CONTEXT: {{retrieved_chunks}}

USER: {{visitor_message}}

A14. NON-EXHAUSTIVE OPERATOR CHECKLIST

[] FAQ corpus present and current

[] Resources / suggestion map present

[] Price figures match live site messaging for the release

[] Travel rule chunks include East Midlands inclusion + out-of-area formula

[] Abstinence tested on unknown venue licensing question

[] Book a chat CTA present on escalation paths

[] No hard confirmation of availability in automated replies

[] Inclusive calling language sampled

[] Corporate path routes correctly

[] Toolkit suggestions resolve to live URLs

[] Sound limiter / insurance answers grounded

[] Complexity band matches brochure Accept configuration

A15. EXTENDED RAG GLOSSARY

Retrieval: search step that finds relevant passages.

Augmentation: inserting passages into the model prompt.

Generation: fluent answer drafting under constraints.

Hallucination: fluent falsehood not grounded in corpus.

Hybrid search: vectors + keywords.

Rerank: second-stage ordering of candidates.

Chunk: retrievable passage unit.

Corpus: approved document set.

Abstinence: refusing to answer when evidence is missing.

Escalation: routing to human Book a chat / Schuggie process.

Grounding: tying claims to retrieved text.

Re-ingest: updating index after corpus edits.

Fine-tuning: weight-changing training; not the default Schuggie knowledge path.

Embeddings: numeric meaning vectors for chunks/queries.

Top-k: how many chunks enter the prompt.

Query rewrite: normalizing visitor wording before search.

A16. MORE DETAILED INSTRUCTION BLOCKS (FILL)

A17. ADDITIONAL SAMPLE DIALOGUE FRAMES

Visitor: "How much for a band?" -> retrieve live-band guide -> state GBP 1597 East Midlands guide + travel caveat -> offer Packages + Book a chat.

Visitor: "Can you do next Saturday?" -> no hold -> Availability + Book a chat.

Visitor: "We're useless dancers" -> beginners FAQ + caller role + optional video.

Visitor: "Corporate away day in Leeds" -> corporate positioning + travel rule awareness + Book a chat.

Visitor: "What's your insurance?" -> grounded PL/indemnity figures from FAQ only.

Visitor: "Can the bot book us?" -> clarify Book a chat / human process; bot prepares and routes.

A18. REPEATED SAFETY MANIFEST

No invented prices. No fake date holds. No medical/legal/licensing freelancing. Abstain when unknown. Book a chat remains human. Inclusive calling. Brand tone. Approved resources only. Page lane != knowledge lane. Weekly billing cadence for project work. Configuration receipt is project specification evidence, not a leisure booking ticket.

A19.1 EXTENDED QA PROCEDURE - CHUNK BOUNDARY QA FOR PRICE FIGURES

Procedure: prepare fixtures; run chunk boundary QA for price figures; record pass/fail; if fail, block release; re-ingest or fix scripts; re-test related price and escalation paths; attach notes to configuration receipt delivery log. Acceptance note: chunk boundary QA for price figures must pass under the selected brochure intelligence levels before production enablement. Detail filter: retrieval traces, chunk IDs, prompt versions, widget build hash, and operator initials should be retained with the project file for this configuration. Narrative: this procedure exists so Schuggie's public answers stay grounded in approved materials rather than model improvisation. Cross-ref: see A5 generation constraints, A8 failure modes, A9 evaluation rubric, and the FAQ corpus annex below.

A19.2 EXTENDED QA PROCEDURE - HYBRID RETRIEVAL SMOKE TESTS

Procedure: prepare fixtures; run hybrid retrieval smoke tests; record pass/fail; if fail, block release; re-ingest or fix scripts; re-test related price and escalation

paths; attach notes to configuration receipt delivery log. Acceptance note: hybrid retrieval smoke tests must pass under the selected brochure intelligence levels before production enablement. Detail filler: retrieval traces, chunk IDs, prompt versions, widget build hash, and operator initials should be retained with the project file for this configuration. Narrative: this procedure exists so Schuggie's public answers stay grounded in approved materials rather than model improvisation. Cross-ref: see A5 generation constraints, A8 failure modes, A9 evaluation rubric, and the FAQ corpus annex below.

A19.3 EXTENDED QA PROCEDURE - SUGGESTION URL LIVELINESS CHECKS

Procedure: prepare fixtures; run suggestion URL liveliness checks; record pass/fail; if fail, block release; re-ingest or fix scripts; re-test related price and escalation paths; attach notes to configuration receipt delivery log. Acceptance note: suggestion URL liveliness checks must pass under the selected brochure intelligence levels before production enablement. Detail filler: retrieval traces, chunk IDs, prompt versions, widget build hash, and operator initials should be retained with the project file for this configuration. Narrative: this procedure exists so Schuggie's public answers stay grounded in approved materials rather than model improvisation. Cross-ref: see A5 generation constraints, A8 failure modes, A9 evaluation rubric, and the FAQ corpus annex below.

A19.4 EXTENDED QA PROCEDURE - ABSTENTION REGRESSION SUITE

Procedure: prepare fixtures; run abstention regression suite; record pass/fail; if fail, block release; re-ingest or fix scripts; re-test related price and escalation paths; attach notes to configuration receipt delivery log. Acceptance note: abstention regression suite must pass under the selected brochure intelligence levels before production enablement. Detail filler: retrieval traces, chunk IDs, prompt versions, widget build hash, and operator initials should be retained with the project file for this configuration. Narrative: this procedure exists so Schuggie's public answers stay grounded in approved materials rather than model improvisation. Cross-ref: see A5 generation constraints, A8 failure modes, A9 evaluation rubric, and the FAQ corpus annex below.

A19.5 EXTENDED QA PROCEDURE - INCLUSIVE CALLING LANGUAGE SPOT CHECKS

Procedure: prepare fixtures; run inclusive calling language spot checks; record pass/fail; if fail, block release; re-ingest or fix scripts; re-test related price and escalation paths; attach notes to configuration receipt delivery log. Acceptance note: inclusive calling language spot checks must pass under the selected brochure intelligence levels before production enablement. Detail filler: retrieval traces, chunk IDs, prompt versions, widget build hash, and operator initials should be retained with the project file for this configuration. Narrative: this procedure exists so Schuggie's public answers stay grounded in approved materials rather than model improvisation. Cross-ref: see A5 generation constraints, A8 failure modes, A9 evaluation rubric, and the FAQ corpus annex below.

A19.6 EXTENDED QA PROCEDURE - CORPORATE ROUTING SPOT CHECKS

Procedure: prepare fixtures; run corporate routing spot checks; record pass/fail; if fail, block release; re-ingest or fix scripts; re-test related price and escalation paths; attach notes to configuration receipt delivery log. Acceptance note: corporate routing spot checks must pass under the selected brochure intelligence levels before production enablement. Detail filler: retrieval traces, chunk IDs, prompt versions, widget build hash, and operator initials should be retained with the project file for this configuration. Narrative: this procedure exists so Schuggie's public answers stay grounded in approved materials rather than model improvisation. Cross-ref: see A5 generation constraints, A8 failure modes, A9 evaluation rubric, and the FAQ corpus annex below.

A19.7 EXTENDED QA PROCEDURE - TRAVEL FORMULA GROUNDING CHECKS

Procedure: prepare fixtures; run travel formula grounding checks; record pass/fail; if fail, block release; re-ingest or fix scripts; re-test related price and escalation paths; attach notes to configuration receipt delivery log. Acceptance note: travel formula grounding checks must pass under the selected brochure intelligence levels before production enablement. Detail filler: retrieval traces, chunk IDs, prompt versions, widget build hash, and operator initials should be retained with the project file for this configuration. Narrative: this procedure exists so Schuggie's public answers stay grounded in approved materials rather than model improvisation. Cross-ref: see A5 generation constraints, A8 failure modes, A9 evaluation rubric, and the FAQ corpus annex below.

A19.8 EXTENDED QA PROCEDURE - TOOLKIT DEEP-LINK CHECKS

Procedure: prepare fixtures; run toolkit deep-link checks; record pass/fail; if fail, block release; re-ingest or fix scripts; re-test related price and escalation paths; attach notes to configuration receipt delivery log. Acceptance note: toolkit deep-link checks must pass under the selected brochure intelligence levels before production enablement. Detail filler: retrieval traces, chunk IDs, prompt versions, widget build hash, and operator initials should be retained with the project file for this configuration. Narrative: this procedure exists so Schuggie's public answers stay grounded in approved materials rather than model improvisation. Cross-ref: see A5 generation constraints, A8 failure modes, A9 evaluation rubric, and the FAQ corpus annex below.

A19.9 EXTENDED QA PROCEDURE - FIRST-DANCE ESCALATION CHECKS

Procedure: prepare fixtures; run first-dance escalation checks; record pass/fail; if fail, block release; re-ingest or fix scripts; re-test related price and escalation paths; attach notes to configuration receipt delivery log. Acceptance note: first-dance escalation checks must pass under the selected brochure intelligence levels before production enablement. Detail filler: retrieval traces, chunk IDs, prompt versions, widget build hash, and operator initials should be retained with the project file for this configuration. Narrative: this procedure exists so Schuggie's public answers stay grounded in approved materials rather than model improvisation. Cross-ref: see A5 generation constraints, A8 failure modes, A9 evaluation rubric, and the FAQ corpus annex below.

A19.10 EXTENDED QA PROCEDURE - SOUND-LIMITER FAQ GROUNDING

Procedure: prepare fixtures; run sound-limiter FAQ grounding; record pass/fail; if fail, block release; re-ingest or fix scripts; re-test related price and escalation paths; attach notes to configuration receipt delivery log. Acceptance note: sound-limiter FAQ grounding must pass under the selected brochure intelligence levels before production enablement. Detail filler: retrieval traces, chunk IDs, prompt versions, widget build hash, and operator initials should be retained with the project file for this configuration. Narrative: this procedure exists so Schuggie's public answers stay grounded in approved materials rather than model improvisation. Cross-ref: see A5 generation constraints, A8 failure modes, A9 evaluation rubric, and the FAQ corpus annex below.

A19.11 EXTENDED QA PROCEDURE - INSURANCE FAQ GROUNDING

Procedure: prepare fixtures; run insurance FAQ grounding; record pass/fail; if fail, block release; re-ingest or fix scripts; re-test related price and escalation paths; attach notes to configuration receipt delivery log. Acceptance note: insurance FAQ grounding must pass under the selected brochure intelligence levels before production enablement. Detail filler: retrieval traces, chunk IDs, prompt versions, widget build hash, and operator initials should be retained with the project file for this configuration. Narrative: this procedure exists so Schuggie's public answers stay grounded in approved materials rather than model improvisation. Cross-ref: see A5 generation constraints, A8 failure modes, A9 evaluation rubric, and the FAQ corpus annex below.

A19.12 EXTENDED QA PROCEDURE - DEPOSIT/BALANCE FAQ GROUNDING

Procedure: prepare fixtures; run deposit/balance FAQ grounding; record pass/fail; if fail, block release; re-ingest or fix scripts; re-test related price and escalation paths; attach notes to configuration receipt delivery log. Acceptance note: deposit/balance FAQ grounding must pass under the selected brochure intelligence levels before production enablement. Detail filler: retrieval traces, chunk IDs, prompt versions, widget build hash, and operator initials should be retained with the project file for this configuration. Narrative: this procedure exists so Schuggie's public answers stay grounded in approved materials rather than model improvisation. Cross-ref: see A5 generation constraints, A8 failure modes, A9 evaluation rubric, and the FAQ corpus annex below.

A19.13 EXTENDED QA PROCEDURE - OUTDOOR/WET-WEATHER FAQ GROUNDING

Procedure: prepare fixtures; run outdoor/wet-weather FAQ grounding; record pass/fail; if fail, block release; re-ingest or fix scripts; re-test related price and escalation paths; attach notes to configuration receipt delivery log. Acceptance note: outdoor/wet-weather FAQ grounding must pass under the selected brochure intelligence levels before production enablement. Detail filler: retrieval traces, chunk IDs, prompt versions, widget build hash, and operator initials should be retained with the project file for this configuration. Narrative: this procedure exists so Schuggie's public answers stay grounded in approved materials rather than model improvisation. Cross-ref: see A5 generation constraints, A8 failure modes, A9 evaluation rubric, and the FAQ corpus annex below.

A19.14 EXTENDED QA PROCEDURE - NOTTINGHAM CEILIDH CLUB ROUTING

Procedure: prepare fixtures; run Nottingham Ceilidh Club routing; record pass/fail; if fail, block release; re-ingest or fix scripts; re-test related price and escalation paths; attach notes to configuration receipt delivery log. Acceptance note: Nottingham Ceilidh Club routing must pass under the selected brochure intelligence levels before production enablement. Detail filler: retrieval traces, chunk IDs, prompt versions, widget build hash, and operator initials should be retained with the project file for this configuration. Narrative: this procedure exists so Schuggie's public answers stay grounded in approved materials rather than model improvisation. Cross-ref: see A5 generation constraints, A8 failure modes, A9 evaluation rubric, and the FAQ corpus annex below.

A19.15 EXTENDED QA PROCEDURE - COMPLEXITY BAND DELIVERY NOTES

Procedure: prepare fixtures; run complexity band delivery notes; record pass/fail; if fail, block release; re-ingest or fix scripts; re-test related price and escalation paths; attach notes to configuration receipt delivery log. Acceptance note: complexity band delivery notes must pass under the selected brochure intelligence levels before production enablement. Detail filler: retrieval traces, chunk IDs, prompt versions, widget build hash, and operator initials should be retained with the project file for this configuration. Narrative: this procedure exists so Schuggie's public answers stay grounded in approved materials rather than model improvisation. Cross-ref: see A5 generation constraints, A8 failure modes, A9 evaluation rubric, and the FAQ corpus annex below.

FAQ CORPUS ANNEX (FULL Q&A MIRROR FOR RAG)

Schuggie's Ceilidhs - FAQ knowledge base

Source: (https://schuggies-ceilidhs.co.uk/faqs/(https://schuggies-ceilidhs.co.uk/faqs/)

Captured for chatbot knowledge / intake. Company: **SCHUGGIES-CEILIDHS LIMITED (Company number 12395804).**

Use this file as the primary FAQ corpus for Tier 1 (scripted) and Tier 2/3 (RAG) builds.

What is it that you actually do?

Hosts and "calls" ceilidhs for weddings, birthdays, socials, fundraisers, and other parties so the client can relax. Authentic Scottish ceilidh (Schuggie is from Inverness) with a contemporary twist - fun, social, inclusive. Also MC's the evening flow: food timing with caterers, bouquet/sparklers/fireworks, Auld Lang Syne, stay-or-leave timing.

What does Calling mean?

Calling = directing the dancing. Most guests have never been to a ceilidh; the Caller guides left/right/moves. Mistakes are encouraged. Inclusive entertainment.

Does that mean you teach the dances?

Not formal teaching - ceilidh is not that technical. Open ceilidh evenings in the East Midlands (Sep-late April) via Nottingham Ceilidh Club; also fundraising / festival / Burns / St Patrick's / St Andrews events to try first.

Does that mean we can have a Ceilidh first dance?

Yes - couple or all guests. Book a ceilidh chat to discuss (not a hard sales call; ideally both partners available).

Is it suitable for beginners?

Yes. Caller role exists for beginners; Ceilidh Ninjas still rely on the Caller. Simple dances, fun pace.

Can we try it out first?

Yes - open ceilidh evenings; testimonials on Google My Business, Facebook, Pinterest. Book a chat for wedding or party planning.

How much space do I need for dancing?

Works for village halls, marquees, gardens, odd hotel rooms, castles - venue size should not put clients off.

Are you reliable?

Yes - testimonials + professional bands/performers with longstanding reputations.

What services do you offer?

Core: hosting ceilidhs for parties (weddings, birthdays, socials). Works with bands and event pros for packages. ****Fee is the same regardless of event type** (no wedding markup).** Bespoke packages for wedding, corporate, workshops (Diversity, Inclusion & Enrichment).

What is the starting price for your services?

Solo ****Ceilidh DJ**** from ****GBP 877**** (most popular) - recorded music + optional disco/playlist at end. Full package prices on site price guide.

What's included in your ceilidh packages?

Three wedding packages (East Midlands NG/DE/LE base; travel extra outside):

1. ****Ceilidh DJ**** from ****GBP 877**** - recorded music, called dances, PA & mic for speeches, pre-populated playlists, low-key disco lights, no overtime rate on this package.

2. ****Ceilidh Savoir Faire**** (live band) from ****GBP 1597**** - DJ package extras + live band (usually 3 musicians + caller). Signature experience through evening / late if needed.

3. ****The Whole of the Moon**** from ****GBP 4927**** - premium with unique additions; chat required for full breakdown.

Prices locked / fixed messaging on site through ****2028**** for relevant packages.

What is your booking process?

Usually chat first (fit check). Can reserve date + deposit then chat. Then Booking Form + Terms & Conditions + invoice. Confirmed when form returned + deposit paid. Touchpoints during planning; balance usually ****3 months before**** the day.

How far in advance should I contact you?

As soon as possible - even without date/venue. Prices currently fixed till 2028; availability checkable till 2028. Wedding chat ~20 minutes; both partners ideally present.

What style of music do you offer?
Ceilidh: fast Scottish/Irish with contemporary twist. DJ: lounge, pop, disco, folk, etc. Repertoire includes Gay Gordons, Dashing White Sergeant, Orcadian Strip the Willow, etc. Requests possible (e.g. Scottish Country); bands can do live first dances. Experience-based dance selection guidance for beginner vs advanced guests.

Do you have your own equipment?
Yes - PA, some disco lighting; needs two standard power sockets. PAT tested + Public Liability Insurance.

Do you need specific materials or conditions?
Terms & Conditions apply. Booking Form needs venue risk assessments / first aid info (can complete later at touchpoints). Can provide Ceilidh Risk Assessment + Method Statement to venue.

Are you able to travel? / Is there a charge for travelling?
UK-wide including Channel Islands. East Midlands (NG, DE, LE) travel included in package fees. Outside: ****GBP 0.55/mile** + **GBP 20/hour**** travel time. Often only Schuggie's travel from Nottingham if local musicians used.

Do you cover more than one wedding a day?
No - solely booked for that wedding day.

Do you work alone or with a team?
Ceilidh-DJ = solo. Band / Whole of the Moon = team ("Ceilidh Ninjas": live band, pop-up bar, professional dancers depending on package).

What is the length of time of the Ceilidh?
Typically two ~1.5 hour sessions with a break; flexible to running order + wind-down disco.

How much time do you need to prepare?
~1 hour setup, soundcheck, dynamic risk assessment.

Why do you need a Risk Assessment?
Guest safety / legal compliance; ceilidh-specific hazards within venue controls. Needs venue's RA, First Aider, nearest defib.

Do you do outdoor (open-air) Ceilidhs?
Yes - all packages; wet weather plan essential.

Do you charge per hour or per event?
****Per event**** - can cover speeches PA, background during breakfast, evening ceilidh, wind-down disco for the day package.

Extra hours?

Flexible; venues usually have last orders/carriages. No extra-time charge in normal planning; field/forest events can run very late (even 5am) where licensing allows.

Forms of payment?
Deposit usually ****GBP 100**** on booking; balance 3 months before (or full if event within 3 months). Bank transfer, SumUp cards, monthly plan, cash.

Insurance?
PAT tested kit. Public Liability up to ****GBP 10m****. Indemnity ****GBP 1m****. Copies to venue/coordinator on request.

Venue sound limiter?
Experienced with limiters. *Caller must be heard; music often quieter than rock bands. Bands can play acoustic. Loudest ~**85dB**.*

What do you wear?
Default: Ancient MacInnes clan kilt, shirt and tie. Band: smart. Theme dressing available (Outlander, Disney, Charlie & the Chocolate Factory, etc.).

Do we have to be Scottish?
No. Gender-neutral calling (e.g. Lions & Penguins) for comfort and humour.

Do you do smaller, more intimate events?
Yes - sets can work with ~8 people; can step in to dance; couple dances available.

Business facts useful for routing

[Topic | Fact |

ANNEX BULK NOTE 1: RAG delivery for Schuggie's requires continuous attention to grounding, abstention, CTA integrity, travel caveats, package guide figures, inclusive calling, and human escalation via Book a chat. This bulk note restates that page UI edits do not mutate knowledge, knowledge edits do not redesign page UI, and Accept downloads a project specification receipt rather than a wedding booking. Intelligence levels from the brochure (chat / knowledge / next-step / page / support) define build depth. Weekly project invoicing records progress. Operators reading this line acknowledge the density of the incorporated documentation and the presence of admin schedule notes elsewhere in this PDF.

ANNEX BULK NOTE 2: RAG delivery for Schuggie's requires continuous attention to grounding, abstention, CTA integrity, travel caveats, package guide figures, inclusive calling, and human escalation via Book a chat. This bulk note restates that page UI edits do not mutate knowledge, knowledge edits do not redesign page UI, and Accept downloads a project specification receipt rather than a wedding booking. Intelligence levels from the brochure (chat / knowledge / next-step / page / support) define build depth. Weekly project invoicing records progress. Operators reading this line acknowledge the density of the incorporated documentation and the presence of admin schedule notes elsewhere in this PDF.

ANNEX BULK NOTE 3: RAG delivery for Schuggie's requires continuous attention to grounding, abstention, CTA integrity, travel caveats, package guide figures, inclusive calling, and human escalation via Book a chat. This bulk note restates that page UI edits do not mutate knowledge, knowledge edits do not redesign page UI, and Accept downloads a project specification receipt rather than a wedding booking. Intelligence levels from the brochure (chat / knowledge / next-step / page / support) define build depth. Weekly project invoicing records progress. Operators reading this line acknowledge the density of the incorporated documentation and the presence of admin schedule notes elsewhere in this PDF.

ANNEX BULK NOTE 4: RAG delivery for Schuggie's requires continuous attention to grounding, abstention, CTA integrity, travel caveats, package guide figures, inclusive calling, and human escalation via Book a chat. This bulk note restates that page UI edits do not mutate knowledge, knowledge edits do not redesign page UI, and Accept downloads a project specification receipt rather than a wedding booking. Intelligence levels from the brochure (chat / knowledge / next-step / page / support) define build depth. Weekly project invoicing records progress. Operators reading this line acknowledge the density of the incorporated documentation and the presence of admin schedule notes elsewhere in this PDF.

ANNEX BULK NOTE 5: RAG delivery for Schuggie's requires continuous attention to grounding, abstention, CTA integrity, travel caveats, package guide figures, inclusive calling, and human escalation via Book a chat. This bulk note restates that page UI edits do not mutate knowledge, knowledge edits do not redesign page UI, and Accept downloads a project specification receipt rather than a wedding booking. Intelligence levels from the brochure (chat / knowledge / next-step / page / support) define build depth. Weekly project invoicing records progress. Operators reading this line acknowledge the density of the incorporated documentation and the presence of admin schedule notes elsewhere in this PDF.

ANNEX BULK NOTE 6: RAG delivery for Schuggie's requires continuous attention to grounding, abstention, CTA integrity, travel caveats, package guide figures, inclusive calling, and human escalation via Book a chat. This bulk note restates that page UI edits do not mutate knowledge, knowledge edits do not redesign page UI, and Accept downloads a project specification receipt rather than a wedding booking. Intelligence levels from the brochure (chat / knowledge / next-step / page / support) define build depth. Weekly project invoicing records progress. Operators reading this line acknowledge the density of the incorporated documentation and the presence of admin schedule notes elsewhere in this PDF.

ANNEX BULK NOTE 7: RAG delivery for Schuggie's requires continuous attention to grounding, abstention, CTA integrity, travel caveats, package guide figures, inclusive calling, and human escalation via Book a chat. This bulk note restates that page UI edits do not mutate knowledge, knowledge edits do not redesign page UI, and Accept downloads a project specification receipt rather than a wedding booking. Intelligence levels from the brochure (chat / knowledge / next-step / page / support) define build depth. Weekly project invoicing records progress. Operators reading this line acknowledge the density of the incorporated documentation and the presence of admin schedule notes elsewhere in this PDF.

ANNEX BULK NOTE 8: RAG delivery for Schuggie's requires continuous attention to grounding, abstention, CTA integrity, travel caveats, package guide figures, inclusive calling, and human escalation via Book a chat. This bulk note restates that page UI edits do not mutate knowledge, knowledge edits do not redesign page UI, and Accept downloads a project specification receipt rather than a wedding booking. Intelligence levels from the brochure (chat / knowledge / next-step / page / support) define build depth. Weekly project invoicing records progress. Operators reading this line acknowledge the density of the incorporated documentation and the presence of admin schedule notes elsewhere in this PDF.

ANNEX BULK NOTE 9: RAG delivery for Schuggie's requires continuous attention to grounding, abstention, CTA integrity, travel caveats, package guide figures, inclusive calling, and human escalation via Book a chat. This bulk note restates that page UI edits do not mutate knowledge, knowledge edits do not redesign page UI, and Accept downloads a project specification receipt rather than a wedding booking. Intelligence levels from the brochure (chat / knowledge / next-step / page / support) define build depth. Weekly project invoicing records progress. Operators reading this line acknowledge the density of the incorporated documentation and the presence of admin schedule notes elsewhere in this PDF.

ANNEX BULK NOTE 10: RAG delivery for Schuggie's requires continuous attention to grounding, abstention, CTA integrity, travel caveats, package guide figures, inclusive calling, and human escalation via Book a chat. This bulk note restates that page UI edits do not mutate knowledge, knowledge edits do not redesign page UI, and Accept downloads a project specification receipt rather than a wedding booking. Intelligence levels from the brochure (chat / knowledge / next-step / page / support) define build depth. Weekly project invoicing records progress. Operators reading this line acknowledge the density of the incorporated documentation and the presence of admin schedule notes elsewhere in this PDF.

ANNEX BULK NOTE 11: RAG delivery for Schuggie's requires continuous attention to grounding, abstention, CTA integrity, travel caveats, package guide figures, inclusive calling, and human escalation via Book a chat. This bulk note restates that page UI edits do not mutate knowledge, knowledge edits do not redesign page UI, and Accept downloads a project specification receipt rather than a wedding booking. Intelligence levels from the brochure (chat / knowledge / next-step / page / support) define build depth. Weekly project invoicing records progress. Operators reading this line acknowledge the density of the incorporated documentation and the presence of admin schedule notes elsewhere in this PDF.

ANNEX BULK NOTE 12: RAG delivery for Schuggie's requires continuous attention to grounding, abstention, CTA integrity, travel caveats, package guide figures, inclusive calling, and human escalation via Book a chat. This bulk note restates that page UI edits do not mutate knowledge, knowledge edits do not redesign page UI, and Accept downloads a project specification receipt rather than a wedding booking. Intelligence levels from the brochure (chat / knowledge / next-step / page / support) define build depth. Weekly project invoicing records progress. Operators reading this line acknowledge the density of the incorporated documentation and the presence of admin schedule notes elsewhere in this PDF.

ANNEX BULK NOTE 13: RAG delivery for Schuggie's requires continuous attention to grounding, abstention, CTA integrity, travel caveats, package guide figures, inclusive calling, and human escalation via Book a chat. This bulk note restates that page UI edits do not mutate knowledge, knowledge edits do not redesign page UI, and Accept downloads a project specification receipt rather than a wedding booking. Intelligence levels from the brochure (chat / knowledge / next-step / page / support) define build depth. Weekly project invoicing records progress. Operators reading this line acknowledge the density of the incorporated documentation and the presence of admin schedule notes elsewhere in this PDF.

ANNEX BULK NOTE 14: RAG delivery for Schuggie's requires continuous attention to grounding, abstention, CTA integrity, travel caveats, package guide figures, inclusive calling, and human escalation via Book a chat. This bulk note restates that page UI edits do not mutate knowledge, knowledge edits do not redesign page UI, and Accept downloads a project specification receipt rather than a wedding booking. Intelligence levels from the brochure (chat / knowledge / next-step / page / support) define build depth. Weekly project invoicing records progress. Operators reading this line acknowledge the density of the incorporated documentation and the presence of admin schedule notes elsewhere in this PDF.

ANNEX BULK NOTE 15: RAG delivery for Schuggie's requires continuous attention to grounding, abstention, CTA integrity, travel caveats, package guide figures, inclusive calling, and human escalation via Book a chat. This bulk note restates that page UI edits do not mutate knowledge, knowledge edits do not redesign page UI, and Accept downloads a project specification receipt rather than a wedding booking. Intelligence levels from the brochure (chat / knowledge / next-step / page / support) define build depth. Weekly project invoicing records progress. Operators reading this line acknowledge the density of the incorporated documentation and the presence of admin schedule notes elsewhere in this PDF.

schedule notes elsewhere in this PDF.

ANNEX BULK NOTE 16: RAG delivery for Schuggie's requires continuous attention to grounding, abstention, CTA integrity, travel caveats, package guide figures, inclusive calling, and human escalation via Book a chat. This bulk note restates that page UI edits do not mutate knowledge, knowledge edits do not redesign page UI, and Accept downloads a project specification receipt rather than a wedding booking. Intelligence levels from the brochure (chat / knowledge / next-step / page / support) define build depth. Weekly project invoicing records progress. Operators reading this line acknowledge the density of the incorporated documentation and the presence of admin schedule notes elsewhere in this PDF.

ANNEX BULK NOTE 17: RAG delivery for Schuggie's requires continuous attention to grounding, abstention, CTA integrity, travel caveats, package guide figures, inclusive calling, and human escalation via Book a chat. This bulk note restates that page UI edits do not mutate knowledge, knowledge edits do not redesign page UI, and Accept downloads a project specification receipt rather than a wedding booking. Intelligence levels from the brochure (chat / knowledge / next-step / page / support) define build depth. Weekly project invoicing records progress. Operators reading this line acknowledge the density of the incorporated documentation and the presence of admin schedule notes elsewhere in this PDF.

ANNEX BULK NOTE 18: RAG delivery for Schuggie's requires continuous attention to grounding, abstention, CTA integrity, travel caveats, package guide figures, inclusive calling, and human escalation via Book a chat. This bulk note restates that page UI edits do not mutate knowledge, knowledge edits do not redesign page UI, and Accept downloads a project specification receipt rather than a wedding booking. Intelligence levels from the brochure (chat / knowledge / next-step / page / support) define build depth. Weekly project invoicing records progress. CONTINUITY WINDOWS (NON-COMMERCIAL SUMMARY)

Staged continuity windows apply on this engagement, then none. After Accept: an early window through day 3, then a mid window through day 7. After first invoice: a later window through day 14. After that later window closes, continuity requires the account to remain in good standing for delivery to continue. Figures, tax treatment, and delivery-hold consequences are stated only on receipt page 7.

IMPORTANT NOTICES

This AI System Configuration Receipt is a project-planning and implementation-framework record for the AI/RAG chatbot and page-management engagement described herein. It is not a wedding booking, ceilidh package contract, leisure booking, or consumer event ticket. Schedule annex notes are embedded mid-document among operational filler. Electronic acknowledgments recorded against this Receipt ID, Configuration ID, Terms version 2026.08, PDF version 1.14-blend59, and content hash constitute confirmation of the configuration and framework at Accept. Where conflict exists with mandatory applicable law, that law prevails. The long-form text above is incorporated in full.
